

HM341: Final Paper Topic

Tikam Alma - 201601030

14 October 2019

In scifi culture cyberpunk is most the interesting that sometimes sparks the idea's of innovation. Also the dystopian world where anything is possible. In the course of HM341 the movie we watched "The Blade Runner" although it's classic movie made in 1982 and depicts the dystopian future or say near future technologies, things that will happen. So the main point from scifi books and movies we can make conclusions and depictions that what should and what should not happen. I have been fascinated by the ideas of technologies in near future, like flying cars, biological enhancement, virtual reality and matrix etc. From movies like Terminators and Ready player one the concept of cyberspace and AI taking the world seems possible.

My final paper topic will cover near future technologies in dystopian world, like cyberspace, hacking, cyborgs, bio-hackers, AIs which will be possible. Also the ethics of these technologies which affects government, societies and peoples, how they use it for good or for bad.
